

# Make training and concept building more efficient

## Philips Dynamalite mini training case

Philips Dynamalite offers the world's finest lighting control system. To help you understand the system and get the most out of its rich feature set, we've developed a mini training case.

### You can use the mini training case to:

- Understand and demonstrate how the Philips Dynamalite system works.
- Apply learnings and practices given during Philips Dynamalite training (mini training case is mandatory).
- Learn how to commission Philips Dynamalite.
- Create proof of concepts during pre-sales or for sales demonstrations.
- Test system configuration before attending a project site.
- Test tasks for advanced sequence or conditional logic functions.

### What's in the demo kit?

The self-contained case includes 24 independently controlled lighting groups arranged for real project requirements, which are spread over two load controllers. Multiple two-way control scenarios are accommodated by two 8-button built-in user interfaces. Three RJ12 sockets are also included to expand the case with real devices during training, or to test the scalability of complex use cases.

### How to order

To order the mini training case, contact the local order desk (12NC: 913703098009). Don't forget, it's also mandatory to obtain this mini training case prior to attending the System Builder training sessions for Philips Dynamalite. For training purposes, we recommend having one kit available for a maximum of two people.

Philips Dynamalite commissioning software will require Windows 7 or higher.
